

Indoor Air Act; and

Whereas, Experts seem to disagree as to whether air filtration systems are sufficiently effective to provide a safe workplace; and

Whereas, Air filtration systems are designed to remove low level contaminants and odors, such as tobacco smoke, and, in particular, the High Efficiency Gas Absorption (HEGA) media filter is a patent-pending air filtration system which affirms to be 95% effective for specified contaminants, including tobacco smoke; and

Whereas, If it is found that air filtration systems are effective in providing a safe work environment, then the SFAA and Clean Indoor Air Act should be amended to allow for certain exceptions to the prohibition of smoking in certain enclosed areas when air filtration systems are established in those areas; now, therefore, be it

Resolved, That the appropriate Committee of the Council of the City of New York hold a hearing on the efficiency of air filtration technologies with respect to Local Law 47 of 2002 (The Smoke Free Air Act) and the Clean Indoor Air Act.
